## Keysight P500xA and P502xA Streamline Series USB VNA

The freedom of portable network analysis doesn't have to mean a compromise in performance. The P50xxA Series brings high-end performance and flexibility to the portable Keysight Streamline Series. Gain confidence in your measurements with best-in-class performance offering fast, reliable, and repeatable results. Explore the complete characterization of your devices with a rich portfolio of software applications that transform the compact network analyzer into a complete RF measurement solution.

The P50xxA Series, a member of Keysight's Streamline Series offers the performance required for testing passive components, amplifiers, mixers or frequency converters. The vector network analyzer (VNA) provides best-in-class key specifications such as dynamic range, measurement speed, trace noise and temperature stability. Choose from 2- or 4-port models up to 53 GHz, or 2-, 4- or 6-port models up to 20 GHz. The VNA is packaged in a compact chassis and controlled by an external computer with powerful data processing capabilities and functionalities.

The P50xxA utilizes the same measurement science as other Keysight VNAs such as the PNA, ENA and PXI VNA. A common software platform makes it easy to choose the right level of performance to match budget and measurement needs. This commonality guarantees measurement consistency, repeatability, and a common remote-programming interface across multiple instruments in R&D and manufacturing.

## Definitions

### Specifications (spec)<sup>1</sup>

Warranted performance. Specifications include guardbands to account for the expected statistical performance distribution, measurement uncertainties, and changes in performance due to environmental conditions. All specifications and characteristics apply over a 25 °C ±5 °C range (unless otherwise stated).

The following conditions must be met:

- Instrument has been turned on for 60 minutes with VNA application running.
- Instrument is within its calibration cycle.
- Instrument remains at a stable surrounding environment temperature (between -10 °C to 55 °C) for 60 minutes prior to turn-on.

### Characteristics (char.)

A performance parameter that the product is expected to meet before it leaves the factory, but that is not verified in the field and is not covered by the product warranty. A characteristic includes the same guardbands as a specification.

### Typical (typ.)

Expected performance of an average unit at a stable temperature between 25°C ±5°C for 60 minutes prior to turn-on and during operation; does not include guardbands. It is not covered by the product warranty. The instrument must be within its calibration cycle.

### Nominal (nom.)

A general, descriptive term or design parameter. It is not tested, and not covered by the product warranty.

### Supplemental Information

A performance parameter that is tested on sampled product during design validation. It does not include guardbands and is not covered by the product warranty.

### Calibration

The process of measuring known standards to characterize an instrument's systematic (repeatable) errors.

### Corrected (residual)

Indicates performance after error correction (calibration). It is determined by the quality of calibration standards and how well "known" they are, plus system repeatability, stability, and noise.

### Uncorrected (raw)

Indicates instrument performance without error correction. The uncorrected performance affects the stability of a calibration.

1. For all tables in this data sheet, the specified performance at the exact frequency of a break is the better value of the two specifications at that frequency.

## Dynamic Range

The specifications in this section apply to measurements made with the Keysight P500xA and P502xA Series USB vector network analyzer under the following conditions:

- No averaging applied to data

1. System dynamic range = source maximum output power minus receiver noise floor at 10 Hz IF bandwidth. Does not include crosstalk effects.
2. It may typically be degraded at 25 MHz.

## Corrected System Performance

This section provides specifications for the corrected performance of the P500xA USB VNA using either of the 85032F, 85052D, 85058D Mechanical Calibration Kit or the N4691D, N4694D Electronic Calibration (ECal) Module. To determine transmission and reflection uncertainty curves with other calibration kits, please download Uncertainty Calculator from [http://www.keysight.com/find/na\\_calculator](http://www.keysight.com/find/na_calculator) to generate the curves for your specific calibration kit.

Measured with 10 Hz IF bandwidth, no averaging applied to data, environmental temperature = 23 °C ( $\pm 3$  °C) with  $< 1$  °C deviation from calibration temperature.

**Table 24. Damage Input Level**

All Models

Description	
Damage Input Level	+27 dBm or ± 35 VDC (Warranted)

## Dynamic Accuracy

Accuracy of the test port input power relative to the reference input power level. Measured with 10 Hz IF bandwidth.

### Dynamic Accuracy<sup>1</sup> – specification

P5000A to P5004A, P5020A to P5024A

P5005A to P5008A, P5025A to P5028A

1. Dynamic accuracy is verified with the following measurements:
  - Compression over frequency
  - IF linearity at three single frequencies (30.6MHz, 49.6MHz and 99.6MHz) using a reference level of -20 dBm for an input power range of 0 to -60 dBm. For values below -60 dBm, refer to [VNA Receiver Dynamic Accuracy Specifications and Uncertainties](#).
2. Download Uncertainty Calculator from [http://www.keysight.com/find/na\\_calculator](http://www.keysight.com/find/na_calculator) to generate the curves of dynamic accuracy.

## Spectrum Analysis (with Option 090 and S97090A)

This section provides specifications for the spectrum analysis Option 090 on the P500xA USB VNA. The S97090A Software is required to enable spectrum analysis functions of the P500xA.

100 kHz to 10 MHz	$\pm 0.15$
10 MHz to 20 GHz	$\pm 0.1$
20 GHz to 53 GHz	$\pm 0.15$

1. With high attenuation. SA detector accuracy is residual error of IF response calibration. IF response is characterized with P50xxA's standard measurement class after power and S-parameter calibration. Therefore, the SA total absolute amplitude accuracy includes power meter, S-parameter and SA detector accuracies. Add input attenuation switching uncertainty if receiver attenuator is changed after user calibration.

## Pulsed-RF Measurements (with Option 021 and S97025A)

This section provides specifications for the pulse modulation hardware (Option 021) on the P500xA and P502xA Series USB VNA. The S97025A Software is required to enable pulsed-RF measurement functions of the P50xxA USB VNA.

## Multi-instrument Measurements with S97551A Software

When the S97551A software is installed, the P500xA and P502xA Series USB VNA have the ability to be configured into a multiport network analyzer with two USB VNAs. Adding a second USB VNA would provide additional test ports to the VNA. This configuration provides a full featured multiport vector network analyzer capability with full crossbar S-parameter measurement capability.

All models of the P500xA and P502xA Series can be connected to configure a single multiport VNA. Multiport configurations using up to two USB VNAs have been evaluated.

For multi-instrument operation, all single-instrument specifications apply except trace noise, test port noise floor, system dynamic range, Displayed Average Noise Level (DANL) and SA detector accuracy. The other performance of multi-instrument configurations will meet the single-instrument specifications in the data sheet.

The guidance provided here is given as general reference based on Keysight's internal evaluation of multi-instrument configurations. Not all multiport setups using multiple USB VNAs are tested as a multiport instrument in the factory. Interconnect cables included in the Y1701A must be used for connection between two P50xxA VNAs.

**Table 42. Multi-instrument Performance**

- A check mark,  $\checkmark$ , indicates the performance parameter is the same as the corresponding single-instrument performance.
- An empty diamond,  $\diamond$ , indicates that the performance parameter may be degraded as the number of instruments increases.

## Multi-site Operation

Multi-site operation is the ability to configure multiple independent USB VNAs to operate independently on a single controller via USB connection. Up to two independent USB VNA instances per PC have been evaluated, allowing parallel testing of devices. Each instance of an independent USB VNA can have different measurement parameters, and can be triggered synchronously, or asynchronously.

1. Sweep mode: Auto. Analyzer display turned off with DISPLAY:VISible OFF. Measured using a host PC with Intel Xeon 3.60 GHz CPU and 64 GB RAM running Windows 10 (64 bit), with Keysight VNA firmware version A.13.70.02. Data transfer includes real and imaginary pair and includes transferring one S-parameter (S11). Uncorrected measurements are for one sweep direction and transferring the corresponding S-parameter.

Description	Information
Keysight IO library	The IO library suite offers a single entry point for connection to the most common instruments including AXIe, PXI, GPIB, USB, Ethernet/LAN, RS-232, and VXI test instrument from Keysight and other vendors. It automatically discovers interfaces, chassis, and instruments. The graphical user interface allows you to search for, verify, and update IVI instrument and soft front panel drivers for modular and traditional instruments. The IO suite safely installs in side-by-side mode with NI I/O software. Free software download at <a href="http://www.keysight.com/find/iosuite">www.keysight.com/find/iosuite</a>
Keysight soft front panel	The USB VNA includes a soft front panel (SFP), a software based graphical user interface (GUI) which enables the instrument's capabilities from your PC.
Command Expert	Assists in finding the right instrument commands and setting correct parameters. A simple interface includes documentation, examples, syntax checking, command execution, and debug tools to build sequences for integration in Excel, MATLAB, LabVIEW, VEE, and SystemVue.
